

Soft Starter (SMC 3 / SMC 32 two controlled phases)

- Rated operational voltage up to 600 VAC 50/60Hz
- Rated operational current up to 25A/30A
- Output signal for By-Pass and Start/Stop
- Ramp Up and Down time adjustable
- Initial Torque adjustable with kick start
- Wide control voltage range
- Meets EN 60947-4-2 requirements
- High number of start/stop operations pr. hour. See data

Soft Starter (SMC 3 / SMC 32 two controlled phases)

Wiring specifications

SMC 3 DA XX03 SMC 32 DA XX15BP

Control voltage A1-A2

SMC 3 DA XX15/25

11-12: for UP62 or other wiring purposes

SMC 3 DA XX25 BP

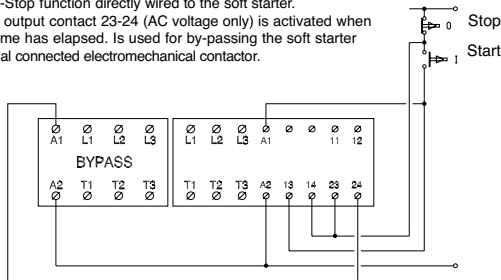

11-12: for UP62 or other wiring purposes

Control voltage A1-A2 Output 13-14: For control of Start/Stop function Output 23-24: By end of ramp up time for by-pass contactor

Wiring example Start/Stop-By-pass (SMC 3 DA XX25 BP)

Auxiliary SCR output contact 13 - 14 (AC voltage only) is used for controlling a Start-Stop function directly wired to the soft starter.
Auxiliary SRC output contact 23-24 (AC voltage only) is activated when the ramp-up time has elapsed. Is used for by-passing the soft starter with an external connected electromechanical contactor.

Motor wiring with or without by-pass (SMC 3 DA XX25 BP)

Standard wiring of a softstarter to a 3-phase motor in delta configuration.

*Use UL approved Magnetic Circuit Breaker or UL specified back-up fuse type K5 or H Class

Short-circuit protection by circuit breaker or fuses

Two type of short-circuit protection can be used:

- Short-circuit protection by circuit breaker.
- Short-circuit protection by fuses.

Short-circuit protection is divided into 2 levels **Type 1** or **Type 2**

Co-ordination Type 1: Short-circuit protects the installation

Co-ordination Type 2: Short-circuit protects the installation and the semi-conductors inside the motor controller

a) Short-circuit protection

Co-ordination type 1 will be obtained when using magnetic circuit breakers or standard gI/GI fuses.

Co-ordination type 2 will be obtained when using semiconductor fuses. When using semiconductor fuses the SCR will not be damaged due to transients and short circuits. The table indicates suitable fuses for co-ordination type 2 protection.

b) Short-circuit protection by fuses

Type 1: SMC 3 DA XX03	Protection max. 25 A. gL/gG
Type 1: SMC 32 DA XX15 BP	Protection max. 50 A. gL/gG 63A T
Type 1: SMC 3 DA XX15	Protection max. 50 A. gL/gG 63A T
Type 1: SMC 3 DA XX25	Protection max. 80 A. gL/gG 63A T
Type 1: SMC 3 DA XX25 BP	Protection max. 80 A. gL/gG 63A T

Type 2: SMC 3 DA XX03	Protection max. i^2t of the fuse 72 A ² S
Type 2: SMC 32 DA XX15 BP	Protection max. i^2t of the fuse 1800 A ² S
Type 2: SMC 3 DA XX15	Protection max. i^2t of the fuse 1800 A ² S
Type 2: SMC 3 DA XX25	Protection max. i^2t of the fuse 6300 A ² S
Type 2: SMC 3 DA XX25 BP	Protection max. i^2t of the fuse 6300 A ² S

Fuses from e.g. Ferraz, Siba, Bussmann can be used as short-circuit protection Type 2

More information concerning Co-ordination Type 2 see page 45

Approval

cUL Std No. 508 (Not approved SMC 33 DA XX50BP and SMC 33 DA XX85DBP)

Application, adjustment hints and general specifications

See page 10-11 / 44-45

3-Phase electronic motor contactor (Direct On Line)

- For Direct On Line start of 3 phase motors
- Rated operational voltage up to 600 VAC 50/60 Hz
- Rated operational current up to 15A AC-3
- Versatile control circuit: 24-480VAC / 24-60VDC
- Unlimited number of start/stop operations / hour
- LED Status indication
- Meets EN 60947-4-2 requirements
- Requires only 45 mm DIN rail space

Item selection and technical specifications

EMC

This component meets the requirements of the product standard EN60947-4-2 and is CE marked according to this standard.

3-Phase electronic motor contactor (Direct On Line)

Wiring specifications

SMC 3 DA XX15 DOL

Short-circuit protection by circuit breaker or fuses

Two type of short-circuit protection can be used:

- Short-circuit protection by circuit breaker.
- Short-circuit protection by fuses.

Short-circuit protection is divided into 2 levels **Type 1** or **Type 2**

Co-ordination Type 1: Short-circuit protects the installation

Co-ordination Type 2: Short-circuit protects the installation and the semiconductors inside the motor controller

a) Short-circuit protection by circuit breaker

A 3-Phase motor with correctly installed and adjusted overload relay will not short circuit totally to earth or between the 3 phases. Part of the winding will normally limit the short circuit current to a value that will cause instantaneous magnetic tripping of the circuit breaker without damage to the electronic contactor. The magnetic trip response current is approx. 11 times the max. adjustable current.

b) Short-circuit protection by fuses

Type 1: SMC 3 DA XX15 DOL Protection max. 50 A gL/gG

Type 2: SMC 3 DA XX15 DOL Protection max. I_{2t} of the fuse 1800 A₂s

Fuses from e.g. Ferraz, Siba, Bussmann can be used as short-circuit protection Type 2

More information concerning Co-ordination Type 2 see page 37

Thermal overload protection (see also page 36)

Optional thermal overload protection is possible by inserting a thermostat in a slot on the right hand side of the soft starter. Type number UP62

The thermostat can be connected in series with the control circuit of the soft starter. When the temperature of the heatsink exceeds 90°C the soft starter will switch Off.

Note: When the temperature has dropped approx. 30°C the soft starter will automatically be switched on again.

The thermostat is connected in series with the control circuit of the main contactor. When the temperature of the heatsink exceeds 90°C the main contactor will switch Off.

A manual reset is necessary to restart this circuit.

SMC 3 DOL General application information

The SMC 3 DOL has been developed for cranes and other harsh applications where inching, jogging and plugging is frequently used and where a high number of operating cycles are essential. In such applications the lifetime of the equipment is normally limited by the short lifetime of the electromechanical contactor. Electromechanical contactors are not designed to switch off motors in locked rotor- or overload conditions where the current is 6 times the nominal operational current (AC-4). The severe arcing will burn the contact elements resulting in unreliable contact function. The Semiconductor Contactor will close the contacts in the zero crossing of the mains voltage and switch-Off will always occur in the zero crossing of the motor current in this way voltage kickback from the inductive motor windings is avoided. The lifetime, therefore, of the Semiconductor Contactor will always be at least one decade longer than the electromechanical contactor.

Overload Protection in Motor Control Reversing

Overload protection of the motor is easily achieved by installing a manual thermal magnetic circuit breaker on the supply side of the motor.

The circuit breaker provides means for padlocking and the necessary clearance for use as a circuit isolator according to EN 60204-1.

Adjust the current limit on the MCB according to the rated nominal current of the motor

*Use UL approved Magnetic Circuit Breaker or UL specified back-up fuse type K5 or H Class

Comparison of lifetime in different utilization categories
